ANNOUNCEMENT 318

AUTHOR INDEX FOR VOLUME 81 319

NOTICE

The Subject Index for Volume 81 will appear in the December 1989 issue as part of a cumulative index for the year 1989.

Digitized by the Internet Archive

Information for Authors

The *Journal of Solid State Chemistry* is a research journal devoted to the chemical, structural, thermodynamic, electronic, magnetic, and optical properties and processes of solids. Theoretical and experimental contributions are both welcome. Critical reviews are occasionally presented in selected rapidly developing fields. The journal also carries a Letters Section.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Solid State Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts may be presented as articles (i.e., conventional full-length expositions), or notes (brief rapid communications of important new work) which are limited to 1200 words. English, French, and German are the official languages of the Journal but submission of articles in English is encouraged. Manuscripts should be submitted to *Journal of Solid State Chemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.

Manuscripts should be submitted in quadruplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections should be typed in capital letters and centered on the page. Each page of the manuscript should be numbered. Page one should consist of the manuscript title, the author's name, and the author's affiliation. For multiple authors, the author to whom correspondence is to be addressed should be indicated. Page two should consist of an abstract (50–150 words) suitable for use in *Chemical Abstracts*. The American Chemical Society's *Style Guide* or the *Style Manual* of the American Institute of Physics should be followed regarding matters of style and abbreviation.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lowercase italic letters (^{a,b,c}). Tables longer than two manuscript pages should be submitted as clear, sharp glossy photographs. They will be reproduced by photoreproduction and should be designed to fit the Journal page after 50% reduction in each dimension. Errors in such tables cannot be corrected in proof.

Auxiliary Material. In lieu of publication, unusually long tables and sequences of repetitive figures must be deposited with the National Auxiliary Publications Service (NAPS).

For material to be deposited, a deposit fee of $25.00 for up to 98 pages of standard-size or 49 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany the deposited material are supplied to the authors by the Editor at the time a paper is accepted for publication. The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material.

See NAPS document No. ___ for ___ pages of supplementary material. Order from ASIS/NAPS. Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10163. Remit in advance $4.00 for microfiche copy or for photocopy, $7.75 up to 20 pages plus $.30 for each additional page. All orders must be prepaid. Institutions and Organizations may order by purchase order. However, there is a billing and handling charge for this service of $15. Foreign orders add $4.50 for postage and handling, for the first 20 pages, and $1.00 for additional 10 pages of material, $1.50 for postage of any microfiche orders.

Figures. Figures should be submitted as glossy prints or as original black ink drawings, no larger than 21.5 × 28 cm. Press type is not acceptable. It is important that lettering on drawings be done with a lettering set and be planned to fit the proportion of the printed page. Lettering on the original should be large enough to be legible after reduction of the figure to single-column width. The difference in type size within a figure should be no more than approximately 15%. The caption of each axis should be lettered parallel to its axis. Background grids should not be included. For halftone reproductions, glossy, high-contrast, black and white prints should be submitted.

Illustrations in color can be accepted only if the authors defray the cost. Each figure should be identified on th back with the author's name and figure number. Figures are to be cited in the text by consecutive Arabi numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten with an Arabic number if necessary fo reference placed in parentheses to the right of equation. Reference to equations should use the form "Eq. (3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on separate page at the end of the paper.

References. References should be cited in the text by consecutive underlined numbers in parentheses. Th references must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation i the text. After the reference number, the author's initials, last name, journal name, volume, initial page numbe and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the styl of *Chemical Abstracts Service Source Index,* 1985. For book references, give the author's name, name of boo (in quotes), Editor's name (if any), edition (if other than the first), chapter or page number, publisher's name place and year of publication.

Manuscripts Dealing Primarily with Single-Crystal Structure. The *abstract* should contain the chemica formula, crystal system, and space group (Hermann–Mauguin symbol), lattice constants with esd's, Z, and signif cant structural features.

The *experimental* section should contain the following information in as brief a form as possible: chemica formula, source of material and its color, lattice constants with esd's, wavelength of the radiation used in the calculation, temperature at which they were measured, type of filter or monochromator, possible space group (and method of distinguishing between groups with the same absences), Z, crystal dimensions, absorptio coefficient, method of correcting for absorption, type of data collection, number of reflections measured, numbe of independent reflections, and agreement factors between multiply measured or equivalent reflections. Th description of the structure determination and refinement should indicate a brief outline of the method use sources of f, $\Delta f'$, and $\Delta f''$, final R factors (weighted and unweighted), the function minimized in refinement, th form of weights in the refinement, and the extinction correction (if applied).

Structural results should contain a description of the structure and the following tables: a table of all atomi coordinates (with esd's) and important bond distances and angles (with esd's). In those structures where atomi displacements or atomic motion is important (ionic conductors, superlattice structures solved as a substructure phase changes, etc.), it may be appropriate to add a table of anisotropic temperature factors. When submitting manuscript three copies of a listing of h, k, l, F_o, F_c (σF_o is optional) must be provided for the reviewers and also if not included in the manuscript, three copies of a table of temperature factors. Authors are strongly encourage to deposit with NAPS structure factor tables, tables of anisotropic temperature factors, all nonessential bon distances and angles, and other supporting structural detail; such material will be retained in the *Journal* editorial office for no longer than one year after publication of the article.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to approval by th communicators, who upon their recommendation for acceptance will forward the manuscript directly to th Editorial Office. Each article should indicate clearly the novelty and urgency of the contribution; it may b helpful to document this more explicitly in an accompanying letter of transmittal. Each communicator mu satisfy himself that the content is not only scientifically sound, but also likely to have such impact as to mer rapid publication. Accepted manuscripts will be published on an accelerated publication schedule. The auth will not receive proofs for correction; it is the responsibility of the author to ensure that the manuscript submitted is free of typographical or substantive errors. Letters should be no longer than 1200 words, with a absolute minimum of figures, tables, and references; an abstract not exceeding 150 words should also b provided. Manuscripts should be sent to the Editor, an Associate Editor, or to one of the following members the Editorial Advisory Board: E. F. Bertaut, J. B. Goodenough, P. Hagenmuller, A. Rabenau, C. N. R. Rao, A. Wold. Full addresses for these Board members are listed on the inside front cover of the journal.

Book Reviews. Book Reviews are published on an irregular schedule, and are limited to books whose conte bears directly on the general area of solid state chemistry. Reviews should be submitted directly to the Editor fo Book Reviews, Dr. Edward Kostiner, Department of Chemistry and Institute of Materials Science, University Connecticut, Storrs, Connecticut 06268.

Proofs. Unfolioed page proofs will be sent directly to the author from the printer together with order forms fo reprints. There is no page charge.
